

Thinking about Skills and Values for their Future

PLUS A half term project: the Youth Industrial Strategy Competition

This week we have been encouraging students to think about the skills and values they will need for their future careers. To inspire you as well, please see the video we are showing them, available to watch on YouTube: [Future jobs and industry: responding to the speed of change.](#)

It is Tomorrow's Engineers Week from the 4th to 8th November. As part of this, we have offered students the opportunity to enter the **Youth Industrial Strategy Competition**, where they need to develop an innovative solution to one of the government's four grand challenges: *AI & Data*, the *Ageing Society*, *Clean Growth* and the *Future of Mobility*.

At Leighton Park we are then offering students something more. With their initial ideas developed over long leave and presented the first week back, top students will have the opportunity to develop their ideas further with the professionals at **Volume AI** before entering into the National Competition.

Volume AI are customer experience creators with Experiential Artificial Intelligence at their heart, who are transforming brand engagement and customer interaction.

Students are expected to develop their ideas over long leave and have access to a Google Classroom, accessible with classroom code: 699895.

For more information on the national competition, please see the British Science Association's video: [The Youth Industrial Strategy Competition: your ideas can change the world](#), available to watch on YouTube and visit <https://awards.yisc.org.uk/>.

Or, if you have any questions please contact Mark Budge on 0118 987 9600 or via email markbudge@leightonpark.com.
